

**1. Describe your research interest in a few lines. Too broad description is not useful for me.**

- I would like to focus my research on Network Management System which can provide centralized management of network resources so as to enhance security, stability and manageability of network. Whenever and wherever, all materials and people are connected by network and variety of information and services are provided everywhere. That's why, I believe that performance improving development on information management system of network which can provide stable and effective services to users 24Hx365D is badly in need not only for IT developed countries but also for IT developing countries like my mother land.

**2. Is the topic you described above a very firm idea or just one of your interested topics? If the latter is the case, just list up keywords to illustrate your interests. Matching of interests between student and supervisor is important in our campus as learning in the master course is very much research –oriented here. This is why I need your most precise and realistic description about your research interest.**

- Actually, I am deeply rooted in network engineering as I have natural bent on managing and controlling of network devices and services. That's why, I am also very much interested in systems concerning with network engineering .The research area I described above is just one of my interested topics. I am also interested in the systems listed below with the keyword of network security , management, monitoring ,control and infrastructure management.
  - -Social Safety Network System
  - -Intelligent Transport System
  - -Wireless Network Security Systems
  - -Intelligent Crimes Prevention/Safety Monitoring Systems
  - -Disaster Prevention Systems

**3. What is your programming and computer skills?**

- I have studied the following programming languages.
  - -C and C++
  - -Batch and Perl
  - -HTML, XML
  - -Visual Basic

- -Java
- -MySQL database
- For the matter of computer skills, I have teaching experiences in DTP software and Internet applications. Moreover, I have some experiences on hardware and system administration ,maintenance and repairing of computers, database management ,configuring and managing servers on Linux and Microsoft platform and configuring routers and switches. I also attended and finished the following courses.
  - Portal Design and Administration by Temasek Polytechnic, Singapore
  - E-Government by Temasek Polytechnic, Singapore
  - Linux Network and Server Administration by Linux Lab, Myanmar
  - Internet Technologies by India Institute of Technology, Khargapur(online learning)
  - Computer Networking by India Institute of Technology, Khargapur(online learning )
  - Public Key Infrastructure by Ministry of Post and Telecommunication , Myanmar
  - Advanced Network Engineering by Joint Japan(JICA) and Myanmar(UCSY)

**4. What is your strength?**

- I think that I am strong in adapting every new IT technology and troubleshooting as I have strong will and desire to be a full-fledged IT engineer who can set an IT milestone for the development of mankind.
