

Field of interest and study plan at Yokohama National University

I am very much interested in security and management of computer network.

Myanmar is a developing country and so it needs advance knowledges, practices and technologies for the infrastructure development. Myanmar Basic e-Government is now implementing and so all the ministries in our country have to take part in it. Basic e-Government system is now gaining momentum. But it still needs to enhance to next level. The network infrastructure is the means of basic telecommunications services as well as the essential prerequisite for e-Commerce, e-Government and e-Learning. Thus, the network infrastructure needs to be perfect and secure. In every stage of e-Government development, network security and management systems need to keep on developing with it. That is why, it is essential to know the knowledge of security and management of computer network systems.

Currently, Myanmar still needs to have network infrastructure security and management systems so as to support the efficient and effective daily transactions and management of data communication. Based on secure, highly reliable and efficient network infrastructure, the whole ICT sector will be able to achieve their goals. After two years' study at your University, I do hope that it will empower me as outstanding IT engineer to manage ICT infrastructure of our country. So, I would like to study for infrastructure Management especially for security and management of computer networks.
